### 3.2 QUICK REFERENCE

3. How to display the Mask indication
(1) Mask indication in the panel side
4. Select \{PANEL FACTORY\} then \{RASTER MASK SETUP\}.
(After entering Factory mode, press [MUTING] once, press
[ENTER/SET], then press [ $\boldsymbol{\downarrow}$ ] 8 times.)
5. Press [ENTER/SET], then select a Mask indication, using [ $\mathbf{\uparrow}$ ] or [ $\boldsymbol{\downarrow}]$.

## Notes when visiting for service

1. Notes when disassembling/reassembling

## 1) Rear case

When reassembling the rear case, the screws must be tightened in a specific order. Be careful not to tighten them in the wrong order forcibly. For details, see "Rear Case" in "7. DISASSEMBLY".
(2) Attaching screws for the HDMI connector

When attaching the HDMI connector after replacing the Main Assy, secure the HDMI connector manually with a screwdriver, but not with an electric screwdriver. If you tighten the screws too tightly with an electric screwdriver, the screw heads may be damaged, in which case the screws cannot be untightened/tightened any more.

## 2. On parts replacement

(1) How to discharge before replacing the Assys

A charge of significant voltage remains in the Plasma Panel even after the power is turned off. Safely discharge the panel before replacement of parts, in either manner indicated below:
A: Let the panel sit at least for 3 minutes after the power is turned off.
B: Turn the Large Signal System off before the power is turned off then, after 1 minute, turn the power off.
For details, see "5.6.1 PANEL DRIVE-POWER ON/OFF FUNCTION".
(2) On the settings after replacement of the Assys

Some boards need settings made after replacement of the Assys. For details, see "8. EACH SETTING AND ADJUSTMENT".

## 3. On various settings

(1) Setting in Factory mode

After a Mask indication into the panel is performed, be sure to set the Mask setting to "OFF" then exit Factory mode.

How to locate several items on the Factory menu
í \{ \} : Item on the Factory menu
[ ] : Key on the remote control unit
: Screen indication

1. Confirmation of accumulated power-on time and power-on count
Select \{INFORMATION\} then \{HOUR METER\}.
(After entering Factory mode, press [ $\downarrow$ ] five times.)
2. Confirmation of the Power-down and Shutdown histories (1) Panel system

PD: Select \{PANEL FACTORY\} then \{POWER DOWN\}. (After entering Factory mode, press [MUTING] once, press [ENTER/SET], then press [ $\downarrow$ ] three times.)
SD: Select \{PANEL FACTORY\} then \{SHUT DOWN\}. (After entering Factory mode, press [MUTING] once, press [ENTER/SET], then press [ $\downarrow$ ] four times.)
(2) MTB section

Select \{INFORMATION\} then \{MAIN NG\}. (After entering Factory mode, press [ $\downarrow$ ] three times.)
-

## Adjustments and Settings after replacement of the

 Assys (Procedures in Factory mode)1. Digital Video Assy: Transfer of backup data
(1) Select \{PANEL FACTORY\}, \{ETC\}, then \{BACKUP DATA\}. (After entering Factory mode, press [MUTING] once, press [ENTER/SET], press [ $\downarrow$ ] seven times, then press [ENTER/SET].)
(2) Select \{TRANSFER\}, using $[\Rightarrow$ ], then hold [ENTER/SET] pressed for at least 5 seconds.
(3) After transfer of backup data is completed, $\{E T C\}$ is automatically selected, and the LED on the front panel returns to normal lighting.
2. MAIN Assy: Execution of FINAL SETUP.
(1) Select $\{$ INITIALIZE $\}$ then \{FINAL SETUP\}, then press [ENTER/SET]. (After entering Factory mode, press [MUTING] three times, then press [ $\downarrow$ ] four times.)
(2) Select "YES", using [ $\Rightarrow$ ]. Then hold [ENTER/SET] pressed for at least 5 seconds.
(3) After "FINAL SETUP IS COMPLETE" is displayed on the screen, turn the POWER switch of the main unit off.
3. POWER SUPPLY Unit: Clearance of the accumulated power-on count and maximum temperature value
(1) Select \{PANEL FACTORY\}, \{ETC\}, then \{P COUNT INFO\}. (After entering Factory mode, press [MUTING] once, press [ENTER/SET], press [ $\downarrow$ ] seven times, press [ENTER/SET], then press [ $\downarrow$ ] six times.)
(2) Press $[\Rightarrow$ ] to select "CLEAR". Hold [ENTER/SET] pressed for at least 5 seconds. After clearance is completed, "ETC" is automatically selected. Clear the maximum temperature value (MAX TEMP) in the same manner.
4. Other Assys: Clearance of the maximum temperature value
(1) Select \{PANEL FACTORY\}, \{ETC\}, then \{MAX TEMP\}. (After entering Factory mode, press [MUTING] once, press [ENTER], press [ $\downarrow$ ] seven times, press [ENTER/SET], then press [ $\downarrow$ ] seven times.)
(2) Press $[\Rightarrow$ ] to select "CLEAR". Hold [ENTER/SET] pressed for at least 5 seconds After clearance is completed, "ETC" is automatically selected.

## Quick Reference upon Service Visit (2) Mode transition and structure of layers in Service Factory mode

## Mode transition in Service Factory mode

- To shift to another mode, press [MUTING].
- To shift to another item in a specific mode, press [ $\mathbf{~}$ ] or [ $\boldsymbol{\downarrow}$ ].
- To shift to the next nested layer below for an item with a "(+)" indication, press [ENTER/SET] To return to the next nested layer above, also press [ENTER/SET].

## 6. SERVICE FACTORY MODE

### 6.1 OUTLINE OF THE SERVICE FACTORY MODE

Operations during Service Factory mode are described here.

### 6.1.1 SERVICE FACTORY MODE TRANSITION CHART

### 6.1.2 HOW TO ENTER/EXIT SERVICE FACTORY MODE

How to enter Service Factory Mode
By using a PDP service remote control)
$\begin{array}{ll}\text { - PDP service remote control } & \text { : Press [FACTORY] key. } \\ \text { By issuing RS-232C commands ) } & \\ \text { - During normal Standby mode } & \text { : Issue [PON] then [FAY]. } \\ \text { - During normal operation mode } & \text { : Issue [FAY]. }\end{array}$

- How to exit Service Factory Mode

By using a PDP service remote control)

- PDP service remote control : press [FACTORY] key.
- Supplied remote control unit : press [HOME MENU] key. By issuing RS-232C commands)
- Issue [FAN].
- How to enter Service Factory Mode by Using the supplied Remote Control Unit
- Same as previous model. Please refer to the technical document (Service Know-how).

### 6.1.3 FUNCTIONS WHEN ENTERING THE SERVICE FACTORY MODE

## Fuctions whose setting are set to OFF

The settings for the following functions are set to OFF when Service Factory mode is entered
(including when the "FAY" command is received) :

## User data

User data will be treated as follows :

- User data on picture-quality and audio-quality adjustments are not reflected, and factory-preset data are output (user data will be retained in memory). When the unit enters Service Factory mode, the current audio-quality adjustment data will be still be retained in memory.
- User-setting data will be applied to the various settings (items on the menus), signal formats, and the items that are associated with path change (HDMI settings, etc.).
- Data on screen (i.e., screen position; meaning clock dividers, and not including data on screen size). Are reset to the default values (data stored in memory will be retained). Screen size will be retained.

| Function | Remarks |
| :--- | :--- |
| 2-Screen Operation | Input function set on the main side is selected. |
| FREEZE |  |
| Auto size, Side Mask | It is not performed during Factory mode. |
| ORBITER, Mask control | Central value operation (ORBITER) |
| Sleep Timer | Cancel the operation. |
| Room light sensor | Turn off the detecting operation (Setting data will be retained.) |
| Blue LED dimmer | Turn off the operation (Setting data will be retained.) |
| Detection of the TRAP switch | The detection operation is stopped. |
| TRAP history | To a possible turning on though the memory is maintained. |
| Display of TV guide | Finish the TV-GUIDE function. |
| Setting of Parental Control | When this is turned off, the block of the screen is released. |
| Power Control | Turn off the operation (However, the setting maintains it.) |
| Image Position | Central value operation |

A

Note: Enter the factory after cancelling ACI because the ACI operation setting OFF and not done.

### 6.1.4 REMOTE CONTROL CODE IN SERVICE FACTORY MODE

| Remote Control Keys | Basic Functions | Remarks |
| :--- | :--- | :--- |
| MUTING | Switching the main items. | Shifting to the next main item (top). |
| $\boldsymbol{\downarrow}$ (DOWN) | Switching the subtitled items. | Shifting downward to the next subtitiled item. |
| $\boldsymbol{\uparrow}$ (UP) | Switching the subtitled items. | Shifting upward to the next upper layer. |
| $\boldsymbol{\omega}$ (LEFT) | Decreasing the adjustment value. | Decreasing the adjustment value. |
| $\Rightarrow$ (RIGHT) | Increasing the adjustment value. | Increasing the adjustment value. |
| ENTER/SET | Switching the layers. | Shifting downward or upward to the next lower or upper layer. |
| INPUT | Selecting INPUT. | Shifting the INPUT to the next function. |
| INPUTxx | Selecting INPUT. | Switching the INPUT to xx. (xx=1 to 7 etc) |
| CH+/P+ | Increasing the channel number. |  |
| CH-/P- | Decreasing the channel number. |  |
| Numeric Keys | Function: TV | Function: TV (previously selected channel number is selected) |
| POWER | Power OFF. | Turning the power off. |
| FACTORY | Factory OFF (Factory mode) | In Factory mode, turning Factory mode off. |
|  | Factory ON (Non-Factory mode). | In Non-Factory mode, turn Fuctory mode on. |
| HOME MENU | Menu ON. | In Factory mode, turn Factory mode off. |
| VOLUME+ | Volume UP. | Increasing 10 the adjustment value. (PANEL FACTORY) |
| VOLUME- | Volume DOWN. | Decreasing 10 the adjustment value. (PANEL FACTORY) |
| DRIVE OFF (Note1) | Drive Mode OFF. | Turning Drive mode off. |
| INTEGRATOR | INTEGRATOR MENU ON. | Enter INTEGRATOR MODE. |

(Note 1) When ten seconds have passed since the [DRIVE OFF] key was pressed at the standby, it becomes invalid. Please press [POWER] key from the [DRIVE OFF] key pressing within ten seconds when you do power supply ON while driven OFF.

PDP service remote control

PDP-6010FD

- The keys labeled with the same names on the service remote control unit have the same functions as those of the supplied remote control unit. (See "2.3 PANEL FACILITIES.")
- For the keys not provided on the supplied remote control unit, see the explanations below:

Note: In the 29-32 rows, the Boot version information on each device is displayed.
In the 19-24 rows, the version of the execution program is displayed.
F - PANEL INFO: It displays the generation of the panel, inchage and the type of the panel. For details on display values and settings, see "10: Panel Information" in "9.3.1. QS1 (PANEL STATUS)."

### 6.2.1.2 VERSION (2)

| Meaning | Item Name | Display Example |
| :--- | :--- | :--- |
| DTV Hardware Version | HARDWARE | XXXXXXXX |
| DTV Hardware Serial | SERIAL | 01234567 |
| DTV Runtime Version | RUNTIME | HHHHHHHH |
| CFE Version | CFE | HHHHHHHH |
| KERNEL Version | KERNEL | HHHHHHHH |
| ROOTS Version | ROOTS | HHHHHHHH |
| FLAGS | FLAGS | H/W (Y) |
|  |  | DVR (Y) FONTS $(Y)$ |
|  |  | DFAST(Y) PLOG $(\mathrm{Y})$ |

### 6.2.1.3 VERSION (3)

| Meaning | Item Name | Display Example |
| :--- | :--- | :--- |
| HMG/HG module Version | HMG/HG | 01234567 |
| User Password | PASSWORD | 1234 |

6.2.1.4 MAIN NG

MTB side's Shutdown NG information

| OSD: MAIN | OSD: SUB | Cause of Shutdown |
| :---: | :---: | :---: |
| AUDIO | ---- | Short-circuit of the speaker terminal or failure of audio amplifier. |
| MODULE | ---- | Failure of communication to Module microcomputer. |
| MA-3L |  | 3-wire Serial Communication of Main microcomputer. |
|  | IF | Communication failure of IF microcomputer |
|  | MULTI | Multi Processor communication failure |
| MA-IIC |  | IIC Communication failure of Main microcomputer |
|  | FE1 | Analog Tuner 1 |
|  | FE2 | Analog Tuner 2 |
|  | MSPMAP | MSP/MAP |
|  | AV-SW | AV Switch |
|  | RGB-SW | RGB Switch |
|  | VDEC | VDEC |
|  | SDRAM | VDEC - SDRAM |
|  | ADC | AD/PLL |
|  | HDMI | HDMI |
|  | US-MSP | MSP |
| MAIN |  | Communication failure of Main microcomputer |
| FAN | FAN1 | Fan stopped |
|  | FAN2 | Fan stopped (Only with models having the Full HD panel) |
| TEMP2 |  | Abnormally high temperature at MTB. |
| DTUNER |  | Failure of Digital Tuner |
|  | PS/RST | Failure to DTV Starting |
|  | RETRY | DTV communication error |
|  | DE-BCM | Abnormally in BCM7038 |
|  | DE-FE | Tuner 1 or 2 |
|  | DE-CAS | Card I/F IC |
|  | DE-VBI | VBI Slicer |
|  | DE-EPI | EEPROM |
|  | TV-G | TV-Guide Error |
|  | HOME-G | Failure at Home Gallery |
|  | DTVMID | Middleware |
|  | DTVAPP | Application |
| RST-MA | M-DCDC | Abnormally in RST2 of MAIN Assy. (power decrease of DC-DC converter) |
|  | RELAY | Abnormally in RST4 of MAIN Assy. (power decrease of Relay power) |
| HMG |  | Failure at Home Media Gallery |
|  | HMG | Home Media Gallery startup error |
| MA-EEP |  | IIC communication line between EEPROM and MAIN. |

## Operation:

Even if $[\longleftarrow$ ] key or $[~ \Rightarrow$ ] key is pressed, $\{$ CLEAR $<=>: Y E S\} \Leftrightarrow\{C L E A R<=>: N O\}$ is repeated. If the [ENTER/SET] key is kept on pressing for 5 second when the status of this menu is $\langle Y E S>$, clear process will begin.

### 6.2.1.5 TEMPERATURE

A present temperature and the FAN rotation are displayed.
If either [ $\longleftarrow$ ] key or [ $\boldsymbol{\square}$ ] key is pressed, the display data is refreshed.

## - Display/Meaning

TEMP1 : The temperature of the sensor on the panel side is displayed by the Fahrenheit (F).
TEMP2 : The temperature conversion display is done with 10 bit the A/D input value of IF uCOM 90 pin (AN4). It is displayed by both the Fahrenheit ( $F$ ) and 8 bit $A / D$ value.
(Remark:When temperature (F) of the sensor becomes more than a specified temperature, the shutdown start of processing.)
FAN1 :The value of the FAN rotating state is displayed.
STOP: stopped, LOW: slow speed, HIGH: high speed.
FAN2 : The value of the rotation state of FAN is displayed.
During a rotation of FAN, 8bit D/A value output from 2 pin (DAO) of IF uCOM is displayed.
It is displayed with OFF during a stop (only for the FHD model).
B-SENSOR : The value that indicated the degree of brightness input into an Room light sensor is displayed.
AD value when the output of the Room light sensor was input into 89 pin (AN5) of IF uCOM is displayed.

### 6.2.1.6 HOUR METER

- Display/Meaning

| Meaning | Item Name | Display Example | Corresponding RS-232C Command |
| :--- | :--- | :--- | :--- |
| HOUR METER (PANEL) | PANEL | 00151 H 21 M | QS3 |
| HOUR METER (MTB) | MTB | 00151 H 21 M | QS3 |
| POWER ON COUNTER | P-COUNT | 00000095 TIMES | QS3 |
| SYSTEM SERIAL | SERIAL |  | QS3 |

Note: The PANEL-side's HOUR METER/P-COUNT acquires information from the PANEL-side.

## - MTB HOUR METER

In HOUR METER screen on Factory Menu, press the [ENTER] key, and then it moves to the screnn to clear MTB HOUR METER. (MTB HOUR METER is cleared only.)

## Operation:

Even if $[\leftrightarrows$ ] key or $[\Rightarrow$ ] key is pressed, $\{C L E A R<=>: Y E S\} \Leftrightarrow\{C L E A R<=>: N O\}$ is repeated.
If the [ENTER/SET] key is kept on pressing for 5 second when the status of this menu is <YES>, clear process will begin.
MTB HOUR METER is cleared only. PANEL HOUR METER is not cleared.

### 6.2.1.7 HDMI SIGNAL INFO 1

A

### 6.2.1.8 HDMI SIGNAL INFO 2

Displays input signal status of HDMI terminal

| Display Item | Meaning |
| :--- | :--- |
| H RES | Number of horizontal pixels (decimal) |
| V RES | Number of vertical lines (decimal) |
| H DE | Number of effectively horizontal pixels (decimal) |
| V DE | Number of effectively vertical lines (decimal) |
| INTRL | Interlace (=INT) or progressive (=PRG) |
| V POL | VSYNC polarity |
| H POL | HSYNC polarity |
| AUDIO (first line) | Sampling frequency. (ex. DVD: 48kHz, CD: 44.1kHz) *1 |
| AUDIO (second line) | PCM (PCM) or No PCM (=no PCM) |
| AUDIO (third line) | Quantization bit |
| COL SP | Color space (AVI Info) (422 or 444 or RGB) *2 |
| COLMET | N/A |
| ASPECT | Aspect (AVI Info) |
| ACTIVE | Video active format (AVI Info) |
| V FMT | Video identification code (AVI Info) |
| PIX RP | N/A |
| SOURCE (first line) | Vendor name of the emission device |
| SOURCE (second line) | Model name of the emission device |

*1: Confirm if this item is displayed when the audio is not outputted
*2: If may not match to the state of source devices when the color is abnormal.

Display of HDMI FACTORY and correspondence of resolution
Please confirm the following 5 items when the picture doesn't come out.

| Input <br> Signal | FACTORY Display |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | H RES | V RES | H DE | V DE | V FMT |
| 480i (525i) @ 60 | 858 | 262 or 263 | 720 | 240 | $720 \times 480 \mathrm{i} @ 60$ |
| 480p (525p) @ 60 | 858 | 525 | 720 | 480 | $720 \times 480 \mathrm{p}$ @60 |
| 1080i (1125i) @ 60 | 2200 | 562 or 563 | 1920 | 540 | $1920 \times 1080 \mathrm{i} @ 60$ |
| 720p (750p) @ 60 | 1650 | 750 | 1280 | 720 | $1280 \times 720 p$ @ 60 |
| 1080p (1125p) @ 60 | 2200 | 1125 | 1920 | 1080 | $1920 \times 1080 p$ @ 60 |
| 1080p (1125p) @ 24 | 2750 | 1125 | 1920 | 1080 | $1920 \times 1080 p$ @ 24 |

### 6.2.1.9 VDEC SIGNAL INFO 1

Displays signal status that is input to VDEC.

| Device | Sub Address <br> (Main screen) | Sub Address <br> (Sub screen) | Meaning |
| :---: | :---: | :---: | :--- |
| VDEC | 205 h | 605 h | CC detection 1 |
|  | 208 h | 608 h | CC detection2 |
|  | 20 Bh | 60 Bh | CC-CRI detection |
|  | 20 Ch | 60 Ch | XDS content advisor 0 |
|  | 20 Dh | 60 Dh | XDS content advisor 1 |

### 6.2.1.11 DTV TUNING STATUS 1

Displays digital broadcast signal information and status upon receiving digital signal.

|  | 1 |  |  | 5 |  |  |  | 10 | 0 |  |  | 15 |  |  |  | 20 | 0 |  |  | 25 |  |  |  | 30 |  |  | 35 |  | 40 |

### 6.2.1.14 DTV TV-GUIDE BER

Exclusively used for production line. TV-Guide error bit ratio information is displayed.

### 6.2.1.15 DEBUG INFO

Exclusively used for technical analysis. Debug information for development use is displayed.

PDP-6010F

### 6.2.2 PANEL FACTORY (+)

Operation Items
This is the menu screen for the adjustment of the panel. Data acquisition and value adjustment can be performed for the following items:

| No. | Indication | Description of functions |
| :---: | :--- | :--- |
| 6.2.2.1 | PANEL INFORMATION | Data, such as the version of the microcomputer of the panel, product serial number, and <br> statuses of memories for adjustment values for the main unit and for backup, are <br> displayed. |
| 6.2 .2 .2 | PANEL WORKS | Operation data, such as accumulated pulse-meter count, accumulated hour-meter <br> count, accumulated power-on count, and the temperature detected by the sensor, are <br> displayed. |
| 6.2 .2 .3 | POWER DOWN | The power-down history is displayed, with the hour-meter values that indicate the hour <br> values when power-downs occurred. |
| 6.2 .2 .4 | SHUT DOWN | The shutdown history is displayed, with the hour-meter values that indicate the hour <br> values when shutdowns occurred. |
| 6.2 .2 .5 | PANEL-1 ADJ (+) | Settings of the driving pulse timing and driving voltage can be performed. |
| 6.2 .2 .6 | PANEL-2 ADJ (+) | White balance and ABL (power consumption) for the panel can be set. |
| 6.2 .2 .7 | PANEL FUNCTION (+) | Perform panel-degradation correction-level setting, phase adjustment of the address, <br> and the streaking-correction setting. |
| 6.2 .2 .8 | ETC. (+) | Copying of backup data and clearance of various data can be performed. |

## ■ Details of indications in each layer

- In the following examples, GUI images for a 50 -inch and 60 -inch models are indicated.

### 6.2.2.1 PANEL INFORMATION

- Data, such as the version of the microcomputer of the panel, product serial number, and statuses of memories for adjustment values for the main unit and for backup, are displayed. No other layers are nested below this layer, and there are no adjustment items.

## ■ Key operation

<DOWN> : Shifting to PANEL WORKS
<UP> : Shifting to COMBI MASK SETUP
(+)
<L/R> : Updating displayed information

B

## Display items:

MODULE : The version of data written in the Module microcomputer (IC3601) is indicated.
-PRG : The program version of the Module microcomputer is indicated.
-DAT : The data version of the Module microcomputer is indicated.
SEQ-PRG : The version of data written in the Sequence LSI (IC3301) is indicated.
-PRG : The program version of the Sequence LSI is indicated.
-PIC : The Picture-data version of the Sequence LSI is indicated.
-SEQ : The sequence-data version of the Sequence LSI is indicated.
SERIAL : The serial number of the module is indicated.
DIG.EEP : The adjusted status of the EEPROM that is mounted on the DIGITAL Assy is indicated.
BACKUP : The adjusted status of the EEPROM for backup that is mounted on the SENSOR Assy is indicated.

### 6.2.2.2 PANEL WORKS

- Data on operations, such as the accumulated pulse-meter counts, hour-meter count, power-on count, and temperature detected by the sensor, are sent back. No other layers are nested below this layer, and there are no adjustment items.

## ■ Contents of the Display item

- PM-B1 to B5: The accumulated pulse-meter counts for the 5 blocks on the screen are indicated. (the lowest-order digit represents millions of pulses.)
- HR-MTR: The hour-meter value (accumulated power-on hours) is indicated.
- P-COUNT: The accumulated power-on count is indicated.
- TEMP1: The current panel temperature and the historical maximum temperature recorded in memory are indicated. The range of temperature indication is from -50.0 to +99.9 . (The temperature unit is " ${ }^{\circ} \mathrm{C}$ (Centigrade) ".)

### 6.2.2.3 POWER DOWN

- The power-down history is displayed. The last most 8 power-down histories are displayed with the hour-meter values that indicate the hours when power-downs occurred. No other layers are nested below this layer, and there are no adjustment items.

## - Key operation

<DOWN> : Shifting to SHUT DOWN
<UP> : Shifting to PANEL WORKS
<L/R> : Updating displayed information
<Causes of power-down and corresponding OSD indications>

| Cause of power-down | OSD Indication | Cause of power-down | OSD Indication |
| :--- | :--- | :--- | :--- |
| POWER SUPPLY Unit | P-PWR | ADDRESS Assy | ADRS |
| SCAN Assy | SCAN | X DRIVE Assy | XDRV |
| 5 V power for SCAN Assy | SCAN5V | DC/DC converter for X drive | X-DCDC |
| Y DRIVE Assy | Y-DRV | X-drive SUS circuit | X-SUS |
| DC/DC converter for Y drive | Y-DCDC | Digital DC/DC converter | D-DCDC |
| Y-drive SUS circuit | Y-SUS | Unknown | UNKNOWN |

* When power-down is confirmed, the factor is displayed as "1st", "2nd", according to the accuracy order.
* The power-down history is not recorded when the power-down occurred at the same place and same time.

### 6.2.2.4 SHUT DOWN

- The shutdown history is displayed. The last most 8 shutdown histories are displayed with the hour-meter values that indicate the hours when shutdowns occurred. No other layers are nested below this layer, and there are no adjustment items.

■ Key operation
<DOWN> : Shifting to PANEL-1 ADJ (+)
<UP> : Shifting to POWER DOWN
<L/R> : Updating displayed information

* When there is detail information when shutdown occurred, the possible defective part is displayed as Sub information. <Cause of shut-down and corresponding OSD Indication >

| Cause of shut-down (MAIN) |  | Cause of shut-down (SUB) |  |
| :---: | :---: | :---: | :---: |
| Item | OSD Indication | Item | OSD Indication |
| Drive Processing IC | SQ_LSI | Communication Error | RTRY |
|  |  | Drive Stop | SQ-NON |
|  |  | Communication Busy | BUSY |
|  |  | Version mismatching (H/S) (M/S) | VER-HS, VER-MS |
| MDU-IIC | MD-IIC | MAIN EEPROM Communication Error | EEPROM |
|  |  | BACKUP EEPROM Communication Error | BACKUP |
|  |  | DAC1 Communication Error | DAC1 |
|  |  | DAC2 Communication Error | DAC2 |
| Abnormally in RST2 power supply | RST2 | - | - |
| Panel temperature | TMP-NG | High temperature of the panel Low temperature of the panel | TEMP-H |

### 6.2.2.5 PANEL-1 ADJ (+)

- Timing and voltage for the driving pulse are set. At third line of the screen, the WB (White Balance) table and frequency table indicating operation status are displayed, and at fifteenth line of the screen, the item for the upper nested layer (PANEL-1 ADJ [+]) is displayed. Pressing the ENTER/SET key shifts the screen to the next nested layer below for item selection.

Key operation
<DOWN> : Shifting to PANEL-2 ADJ (+)
<UP> : Shifting to POWER DOWN
<SET> : Shifting to the next nested layer

- When the screen is shifted to the next nested layer below, the item of the layer above is indicated at third line of the screen, and the item of the layer below is indicated at fifteenth line.
- The configuration of the menu screen is the same for any adjustment item that has lower layers.
- To confirm that the change in the SUS FREQ. setting has resulted in diminishing of AM radio interference in this layer, after changing the setting, turn the unit off then back on.

## Key operation

<DOWN> : Shifting to the next item
<UP> : Shifting to the previous item
<RIGHT> : Adding by one to the adjustment/ setting value
<LEFT> : Subtracting by one from the adjustment/setting value
<VOL+> : Adding by 10 to the adjustment/ setting value
<VOL-> : Subtracting by 10 from the adjustment/setting value
<SET> : Determining the adjustment/setting value and shifting to the upper layer
6.2.2.6 PANEL-2 ADJ (+)

- White balance can be adjusted by adjusting R, G, and B gain. Pressing the ENTER/SET key shifts the screen to the next nested layer below for item selection.

## - Key operation

<DOWN> : Shifting to PANEL FUNCTION (+)
<UP> : Shifting to PANEL-1 ADJ (+)
<SET> : Shifting to the next nested layer

■ Key operation
<DOWN> : Shifting to the next item
<UP> : Shifting to the previous item
<RIGHT> : Adding by one to the adjustment/ setting value
<LEFT> : Subtracting by one from the adjustment/setting value
<VOL+> : Adding by 10 to the adjustment/ setting value
<VOL-> : Subtracting by 10 from the adjustment/setting value
<SET> : Determining the adjustment/setting value and shifting to the upper layer

| Sequence Name | Video50 | Video60 | Video72 | Video75 | PC60 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Adjustment Value <br> Table | TBL2 | TBL1 | TBL1 | TBL3 | TBL4 |

The ABL/WB adjustment values are grouped into up to four tables, depending on the drive sequences. The adjustment value for the actually driven table is displayed. The number of the adjustment table and the drive sequence currently selected are displayed on the right side of the third line as the On-Screen display.

## Drive sequence and adjustment table

6.2.2.7 PANEL FUNCTION (+)

- A setting for panel degradation correction can be made. Pressing the ENTER/SET key shifts the screen to the next nested layer below for item selection.

■ Key operation
<DOWN> : Shifting to ETC.(+)
<UP> : Shifting to PANEL-2 ADJ (+)
<SET> : Shifting to the next nested layer

## ■ Key operation

<DOWN> : Shifting to the next item <UP> : Shifting to the previous item <RIGHT> : Adding by one to the adjustment/ setting value
<LEFT> : Subtracting by one from the adjustment/setting value
<SET> : Determining the adjustment/setting value and shifting to the upper layer
6.2.2.8 ETC. (+)

- The setting about the backup of panel adjusting value and various data on panel operational information can be cleared. Pressing the ENTER/SET key shifts the screen to the next nested layer below for item selection.

B

- Key operation
<DOWN> : Shifting to RASTER MASK SETUP (+)
<UP> : Shifting to PANEL FUNCTION (+)
<SET> : Shifting to the next nested layer
c

■ Key operation
<DOWN>: Shifting to the next item
<UP> : Shifting to the previous item
<RIGHT> : Adding by one to the adjustment/ setting value
<LEFT> : Subtracting by one from the adjustment/setting value
<SET> : Determining the adjustment/setting value and shifting to the upper layer

### 6.2.2.9 RASTER MASK SETUP (+)

- This menu set the RASTER MASK and the drive sequence at RASTER MASK state. Pressing the ENTER/SET key shifts the screen to the next nested layer below for item selection.

■ Key operation
<DOWN> : Shifting to PATTERN MASK SETUP
(+)
<UP> : Shifting to ETC. (+)
<SET> : Shifting to the next nested layer
<UP> : Shifting to the previous MASK
<RIGHT> : Changing MASK sequence (+)
<LEFT> : Changing MASK sequence (-)
<SET> : Determining the adjustment/setting
<SET> $\quad$ : Determining the adjustment/setting
value and shifting to the upper layer

■ Key operation
<DOWN>: Shifting to the next MASK

A

### 6.2.2.10 PATTERN MASK SETUP (+)

- This menu set the PATTERN MASK and the drive sequence at PATTERN MASK state. Pressing the ENTER/SET key shifts the screen to the next nested layer below for item selection.

- Key operation
<DOWN> : Shifting to COMBI MASK SETUP (+) <UP> : Shifting to RASTER MASK SETUP (+) <SET> : Shifting to the next nested layer

## Key operation

<DOWN> : Shifting to the next MASK
<UP> : Shifting to the previous MASK
<RIGHT> : Changing MASK sequence (+)
<LEFT> : Changing MASK sequence (-)
<SET> : Determining the adjustment/setting value and shifting to the upper layer

- The MASK indication sequence can be changed among $48 \mathrm{~V}, 50 \mathrm{~V}, 60 \mathrm{~V}, 72 \mathrm{~V}, 75 \mathrm{~V}$ and 60 P using the Right or Left key. The selected sequence and the ABL/WB table are retained until the mask is turned off.
6.2.2.11 COMBI MASK SETUP (+)
- This menu set the COMBI MASK and the drive sequence at COMBI MASK state. Pressing the ENTER/SET key shifts the screen to the next nested layer below for item selection.

## - Key operation

<DOWN> : Shifting to PANEL INFORMATION
<UP> : Shifting to PATTERN MASK SETUP (+)
<SET> : Shifting to the next nested layer

## Key operation

<DOWN> : Shifting to the next MASK <UP> : Shifting to the previous MASK <RIGHT> : Changing MASK sequence (+) <LEFT> : Changing MASK sequence (-)
<SET> : Determining the adjustment/setting value and shifting to the upper layer

- The MASK indication sequence can be changed among $48 \mathrm{~V}, 50 \mathrm{~V}, 60 \mathrm{~V}, 72 \mathrm{~V}, 75 \mathrm{~V}$ and 60 P using the Right or Left key. The selected sequence and the ABL/WB table are retained until the mask is turned off.

### 6.2.3 OPTION

Operation item

A

| No. | Function | Content | RS-232C |
| :---: | :---: | :---: | :---: |
| 6.2.3.1 | EDID WRITE MODE <=> | DISABLE <=> ENABLE | --- |

| 6.2.3.3 | AFT <=> | OFF <=> ON (Controls AFT action) | --- |
| 6.2.3.4 | SYNC DET (+) | Exclusively used for technical analysis | -- |
| 6.2.3.5 | CC (+) | Exclusively used for technical analysis | -- |

### 6.2.3.1 EDID WRITE MODE <=>

B
Exclusively used for production line.

### 6.2.3.2 ANTENNA MODE <=>

Exclusively used for production line.

### 6.2.3.3 AFT <=>

Exclusively used for production line.

### 6.2.3.4 SYNC DET (+)

Exclusively used for technical analysis (details omitted).

### 6.2.3.5 CC (+)

Exclusively used for technical analysis (details omitted).

### 6.2.4 INITIALIZE

Operation item

| No. | Function | Content | RS-232C |
| :---: | :--- | :--- | :---: |
| 6.2.4.1 | SIDE MASK LEVEL $(+)$ | Configure the color of the side mask. | SML |
| 6.2.4.2 | FINAL SETUP $(+)$ | Initialize flash memorys on virgin product status | FST |
| 6.2.4.3 | HMG/HG SERVICE MODE | Enter HMG/HG SERVICE MODE | --- |
| 6.2.4.4 | Wide XGA AUTO <=> | Exclusively used for technical analsyis. | --- |

Note: When there is an altered history due to an open TRAP SW, if the "DISPLAY" key is held for at least 5 seconds on the above menu, the altered history will be cleared and the unit will be back to normal.

### 6.2.4.1 SIDE MASK LEVEL (+)

To configure sidemask level (To adjust the values, input signal is required).

| Display | Content | RS-232C |
| :---: | :--- | :---: |
| SIDE MASK LEVEL <=> | Adjust Side Mask level (Adjustable range: 000 to 255) | SML |

6.2.4.2 FINAL SETUP (+)

- To reset each memory values to factory default values. Factory command is "FST".
- When the configuration is set to <NO> and the [ENTER/SET] key is pressed, no action is taken and the menu returns to previous screen.
- When the configuration is set to <YES> and the [ENTER/SET] key is pressed for 5 seconds, the reset action executes.

## Be sure to disconnect and connect the AC cable after FINAL SETUP. When replacing the MAIN Assy, the FINAL SETUP is required.

## 8. EACH SETTING AND ADJUSTMENT

1. At shipment, the unit is adjusted to its best conditions. Normally, it is not necessary to readjust even if an assembly is replaced. If the adjustment is shifted or if it becomes necessary to readjust because of part replacement, etc., perform the adjustment as described below.
2. Any value changed in Service/Factory mode will be stored in memory as soon as it is changed. Before readjustment, take note of the original values for reference in case you need to restore the original settings.
3. Use a stable AC power supply.

### 8.1 ADJUSTMENT REQUIRED WHEN THE UNIT IS REPAIRED OR REPLACED $\square$ When any of the following assemblies is replaced

| POWER SUPPLY Unit | Refer to "8.3 HOW TO CLEAR HISTORY DATA" and "8.6 PRECAUTION ON REPLACEMENT OF THE POWER SUPPLY UNIT". |
| :---: | :---: |
| DIGITAL Assy | Writing of backup data is required. Refer to the "8.2 BACKUP OF THE EEPROM (DIGITAL ASSY)". |
| X DRIVE Assy | No adjustment required |
| Y DRIVE Assy | No adjustment required |
| Service Panel Assy | Refer to "8.3 HOW TO CLEAR HISTORY DATA" and "8.4 ADJUSTMENTS WHEN THE SERVICE PANEL ASSY IS REPLACED". |
| MAIN Assy (*) | No adjustment required |
| PANEL SENSOR Assy | Writing of backup data is required. <br> Refer to the " 8.2 BACKUP OF THE EEPROM (DIGITAL ASSY)". |
| Other assemblies | No adjustment required |

## Note: Checking the Cable Card ID

The PDP has a slot for a cable card that is used for managing your information by the cable TV company. The following procedure allows you to check your Cable Card ID and the Host ID.

1. Press HOME MENU.
2. Select "Tuner Setup". ( $\boldsymbol{\uparrow} / \downarrow$ then ENTER)
3. Select "Channel Setup". ( $\leftarrow / \rightarrow$ then ENTER)
4. Select "POD ID". ( $\boldsymbol{4} / \boldsymbol{\downarrow})$

- The Host ID and Cable Card ID appear.

5. Press HOME MENU to exit the menu.
(*) : When replacing the MAIN Assy, be sure to perform the FINAL SETUP.

## Notes on replacing parts

For the parts described in the list below, replacement is required for the whole Assy, not only the defective part. If any part listed below is identified as defective and needs replacement, replace the whole Assy, and make necessary adjustments after replacement.

- Reason: The whole Assy must be replaced, because adjustments and data rewriting for the Assy at the level of production line are required.

| PCB Assy No. | Assy Name | Parts that Require Whole-Assy Replacement |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Ref No. | Function Name | Part No. |

No adjustment required

### 8.2 BACKUP OF THE EEPROM (DIGITAL ASSY)

## Outline

Adjustment data are stored in the EEPROM (4K) on the DIGITAL Assy in the production process. Those adjustment data are also automatically stored in the EEPROM (for backup) on the PANEL SENSOR Assy.
If the DIGITAL Assy is replaced, those adjustment data for backup can be copied from the EEPROM on the PANEL SENSOR Assy to a new DIGITAL Assy.

## Backed up data

- Drive voltage adjustment value
- Serial No.
- Hour-meter count
- Drive waveform adjustment value
- Pulse-meter count
- P-ON counter value
- Panel white balance adjustment value
- PD/SD histories

## How to copy backup data

## 1. When the DIGITAL Assy is replaced with one for service (usual service)

Adjustment data can be restored by copying the data backed up in the PANEL SENSOR Assy to the EEPROM on a new DIGITAL Assy.
The EEPROM on the new DIGITAL Assy has no adjustment data, and the EEPROM for backup in the PANEL SENSOR Assy has adjustment data. After replacing the DIGITAL Assy, enter PANEL FACT. mode, display the PANEL INFORMATION page, then check if "NO DATA!" is set for "DIG. EEP" and "ADJUSTED" is set for "BACKUP". Then, proceed in the following steps:
(1) Copying, using the Factory menu
(1) Plug in the AC cord, press the Power switch on the unit to set it to ON, then enter Standby mode.
(2) Turn on the power, using the remote control unit, then enter Panel Factory mode. Copy the backup data, as shown in the figure below.

(3) Turn the power off.

- After the DIGITAL Assy is replaced with one for service, be sure to check if "NO DATA!" is set for "DIG. EEP" on the PANEL INFORMATION page of the PANEL FACT. mode.
- If copying of the backup data fails in the above procedure, the red LED lights, and the blue LED flashes, as a warning that no backup data were copied.
- If both the DIGITAL and PANEL SENSOR Assys are to be replaced, first replace the PANEL SENSOR Assy, turn the unit on and back off again, then replace the DIGITAL Assy.

## (2) Copying, using the RS-232C commands

(1) Turn on the unit, using the remote control unit or by issuing the PON command. Then issue the FAY command.
(2) Issue the BCP command to transfer the data stored in the EEPROM for backup.
(3) Turn the power off.

## 2. When a secondhand DIGITAL Assy that had been mounted in another product is to be reused

As adjustment data for another product are already stored in the secondhand DIGITAL Assy, first delete those data then copy the backup data stored in the EEPROM on the PANEL SENSOR Assy.
(1) Copying, using the Factory menu
(1) Plug in the AC cord, press the Power switch on the unit to set it to ON, then enter Standby mode.
(2) Turn on the power, using the remote control unit, then enter Panel Factory mode. Copy the backup data, as shown in the figure below.
PANEL INFORMATION

Key Down 7th

C

SET (5 sec)
(3) Turn the power off.

## Note:

If the secondhand DIGITAL Assy is mounted in the product then the unit is turned on then back off again, the data in the EEPROM on the DIGITAL Assy are copied over the EEPROM in the PANEL SENSOR Assy. Thus the backup data can never be restored. During the first power-on after the DIGITAL Assy is replaced, be sure to enter Factory mode to copy the backup data. Or, before removing the secondhand DIGITAL Assy from the original product, delete the adjustment data on it, using the Factory mode (DIGITAL EEPROM: DELETE), mount it to the product to be repaired, then copy the data from the backup EEPROM.
(2) Copying, using the RS-232C commands
(1) Turn on the unit, using the remote control unit or by issuing the PON command. Then issue the FAY command.
(2) Issue the UAJ command to delete data stored in the EEPROM on the DIGITAL Assy.
(3) Issue the BCP command to transfer the data stored in the EEPROM for backup.
(4) Turn the power off.

3

## 3. In a case where normal backup data are not stored in the backup EEPROM because the EEPROM on the DIGITAL Assy is defective, etc., and where manually adjusted values are to be applied to the product

Note: In this section, it is assumed that settings for various items have been completed, using Factory menu or RS-232C commands.
(1) Method using the Factory menu
(1) Set various setting/adjustment values.
(2) Proceed in the following steps.

(3) Turn the power off.

Note:
When a DIGITAL Assy with an EEPROM in which adjustment data are stored is mounted, this step is not required after manual adjustment. ("DIGITAL EEPROM: REPAIR" is not indicated.)
(2) Method using the RS-232C commands Issue the FAJ command.

### 8.3 HOW TO CLEAR HISTORY DATA

## Clearance of various logs after the Assys are replaced

Besides adjustment data, data on accumulated power-on time and logs on defective parts of the product are backed up. Some of those data must be cleared after the Assys are replaced for service.
(1) Clearance of logs, using the RS-232C commands

| Item | Content | When the Panel <br> is replaced | When the POWER <br> SUPPLY Unit <br> is replaced | When the Other <br> parts <br> is replaced | RS-232C <br> Commands |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Hour-meter | Accumulated power-on time | Must be cleared | No need to be <br> cleared | No need to be <br> cleared | CHM <br> Pulse-meter |
| Accumulated number of pulses <br> emitted | Must be cleared <br> (mandatory) | No need to be <br> cleared | No need to be <br> cleared | No need to be <br> cleared | No need to be <br> cleared |
| Shutdown history | Cause of an SD and hour-meter <br> count | Must be cleared | CSD |  |  |
| Power-down history | Cause of an PD and hour-meter <br> count | Must be cleared | No need to be <br> cleared | No need to be <br> cleared | CPD |
| Power-on counter | Relay-on count | No need to be | Must be cleared <br> (mandatory) | No need to be <br> cleared | CPC |
| MAX TEMP | Historical max. temperature | Must be cleared | Must be cleared | Must be cleared | CMT |

Notes: - As the pulse-meter count is used for each correction function, it must be cleared when an Assy relevant to correction functions is replaced.

- When clearing logs, using the RS-232C commands, first enter Factory mode (by issuing FAY or PFY), then issue the corresponding command.
(2) Clearance of logs, using the Factory menu
(1) Plug in the AC cord, press the Power switch on the unit to set it to ON, then enter Standby mode.
(2) Turn on the power, using the remote control unit, then enter Panel Factory mode. Delete various logs, as shown in the figure below.

(3) Turn the power off.

### 8.4 ADJUSTMENT WHEN THE SERVICE PANEL ASSY IS REPLACED

After the panel is replaced with one for service, voltage margin adjustment is required.

## [Preparation]

Basically, voltage margin adjustment is performed using the Panel Factory menu.
After the panel is replaced and the unit is turned on, clear the pulse meter first.
For details on how to clear the pulse meter, see "8.3 HOW TO CLEAR HISTORY DATA".
*1: As various corrections are made referring to the pulse-meter count to calculate how long the panel has been used, if adjustment of the panel for service is performed without clearing the pulse-meter count, proper adjustments will not be performed.
*2: The drive sequence for $60-\mathrm{Hz}$ video is used for adjustment. When adjustment is made using the Panel Factory menu, the current drive sequence is displayed on the screen, as shown in the figure below. Make sure that 60VS is always indicated during adjustment.

Example of the On-Screen display during Panel Factory mode

## [Supplement]

In the "PANEL-1ADJ" layer, the Panel White Balance value is reset to default, Panel Gamma is set to Straight, Noise is set to OFF, LUT mode is set to ON and Reset active control is set to OFF.
In this case, "----/****" (**** represents the current drive sequence) is displayed on the third line of the On-Screen display during Panel Factory mode.

If adjustment is performed using RS-232C commands, the following commands must be transmitted for preparation:
[PAV S00] : To set panel drive mode to Factory
[VFQ S03] : To set Drive Sequence to Video 60-Hz
[WBI S01] : To temporarily reset the Panel WB adjustment value to default (WBI S00 cancels this setting.)
[PGR S00] : To set the gamma $R$ value to that for Factory mode
[PGG S00] : To set the gamma G value to that for Factory mode
[PGB S00] : To set the gamma B value to that for Factory mode
[DIZ S03] : Dither ON, L dither ON, noise OFF.
[\$1800000001] : LUT mode ON
[\$1000003F00] : Reset active control OFF.
*: If the unit is shut down during the above adjustment flow, resend the above commands from the beginning.
